PIR SENSOR IN PROTEUS USING ARDUINO

AIM:

To write an Embedded C program for interfacing PIR Sensor using Arduino Uno and Proteus

SOFTWARE REQUIRED:

- Proteus 8 software.
- Arduino IDE software

CIRCUIT DIAGRAM:

PROGRAM:

```
int Status = 13; // Digital pin D6
int sensor = 12; // Digital pin D7

void setup() {
    Serial.begin(9600);
    pinMode(sensor, INPUT); // declare sensor as input
    pinMode(Status, OUTPUT); // declare LED as output
}
```

```

void loop() {
  long state = digitalRead(sensor);

  Serial.println(state);

  if(state == HIGH) {
    digitalWrite (Status, HIGH);
    Serial.println("Motion detected!");
    delay(1000);
  }
  else {
    digitalWrite (Status, LOW);
    Serial.println("Motion absent!");
    delay(1000);
  }
}

```

OUTPUT:

RESULT:

Thus the program has been successfully verified and executed.
